Large doses of lithium ions have caused dizziness and debility and can damage the kidneys when sodium ingestion is restricted. Further there have been reports of dehydration, loss of weight, dermatological effects and thyroid dysfunctions. The effects on the central nervous system are unclear speech, blurred sight, loss of feeling, ataxia and convulsions, diarrhea, vomiting and neuromuscular effects like trembling. Repeated exposure to lithium ions can cause clonus and hyperactive reflexes. Bromine inhalation or sustained exposure often leads to bromine acne, particularly in the face, comparable acne and furunculosis. Acute symptoms of higher exposure levels are depression and psychosis. To our knowledge, the chemical, physical and toxicological properties have not been investigated thoroughly.
